Project Points:	Milestone 3 -	**Semester**:	Spring 2021
Date Set:	*18th June, 2021*	**Due Date**:	*27th June, 2021*
Course:	Database Systems	**Instructor**:	Ms. Safia Fatima

This is with regards to the third milestone that each group will submit for their semester project in the course of Database Systems. Before moving on to what you need to do for submitting this milestone, here are some important points that should be considered, so there's no room for confusion:

- A group can have a maximum of 3 members only and if someone wants to do the project alone, he/she can do so as well.

- There will be only one submission for each milestone per group. So if one person from your group has submitted the milestone, you do not need to submit again.

- The deadlines for each milestone shall be strictly met otherwise your group might be penalized.

1. Back-end

The project should have an elaborate back-end consisting of a database created in MySQL or mongo. There should be enough tables/collections to display the complexity of the project and to carry out a good number of complex queries.

2. Front-end

The back-end shall be linked to a front-end which can be any platform or portal such as a website. This link can be made through php or any other choice of yours. This front-end will be the interface that any user would interact with so it needs to be well managed.

3. Presentation

After you have made your project, you will need to show up for an *online* presentation where you will demonstrate your project. Questions will be asked about the front-end and back-end and how you have managed everything in your project. All members need

to be there for their respective presentations because questions can be asked from anyone. The presentations will be held on **28th June, 29th June, and 1st July**, and the sequence of presentation is in the attached file. **The groups who will miss their slot will be marked 0**

3. Submission

You need to submit two things:

1. **Project Files:**
   Submit all the project related files (mysql, html, css, php, etc.) enclosed in a zip folder.

2. **Team Work Load Division:**
   You need to submit a text file that will have a paragraph in which you will explain which member of the group has worked on which aspect of the project? Who worked on front-end and who handled back-end? Any other work you did? How long it took you to do all the different aspects?
   The work needs to be fairly divided because in the end, questions will be asked from each member about their contributions to the whole project.
